

FAQs

Q. When will I see results?

A. Two weeks following the first treatment you will begin to see results and significantly less hair will grow back. Additionally, with each treatment, the amount of hair regrowth will decrease.

Q. How long does each treatment take?

A. The typical regimen is 6-10 treatment sessions, spaced 4-12 weeks apart. Treatment time depends on the area being treated. The average treatment takes approximately 15 minutes.

Q. Why are multiple treatments necessary?

A. About 20-25% of human hair follicles on the body are in the active growth phase at any given time. This is the percentage of hair follicles that can be destroyed in a single treatment session. In order to eliminate up to 90% of the hair, treatments should be repeated until the desired result is achieved.

Q. Are the treatments safe and painless?

A. SharpLight's DPC treatments are non-invasive and safe. During the procedure, there may be a slight 1-2 second, momentary tingling sensation that may be felt, but no pain. The treatments leave you with zero downtime so you can get them done between your errands or lunch hour and quickly return to your daily routine.

Why you should choose hair removal with SharpLight

- ▶ Non-invasive, long term hair reduction
- ▶ Clean and pain free treatments
- ▶ Safe and effective solution
- ▶ Noticeable results after the very 1st treatment
- ▶ No downtime
- ▶ Treatment all year round

What our Practitioners are Saying:

Dr. Eduardo Weiss
Dermatologist, F.A.A.D

With SharpLight's DPC technology, I have had the ability to provide treatments to an ethnically diverse patient population. I now have the capability to adjust parameters for varying skin types, which ensures that safety measures are met for all my patients, all while still providing them with effective results. »

SHARPLIGHT™
the beauty of your success

Hair Removal

Discover a world without waxing, tweezing, or shaving

Hair removal using DPC technology
Dynamic Pulse Control™ (DPC) is a proprietary light-based technology used for permanent reduction of unwanted hair. One of its clearest advantages is that it has a shorter treatment period in comparison to traditional IPLs.

Smooth, hair-free skin is only a treatment away

Imagine never having to take care of unwanted hair on your body ever again. In a split second you can go to the beach, the pool, or just wear the outfit of your choice without thinking about your exposed skin. Hair removal is the #1 aesthetic treatment among non-invasive procedures. Over the past decade, men have also chosen to get rid of unwanted hair, which has made the treatment even more popular.

99%
of women voluntarily remove body hair

85%
do so regularly, even daily

Hair removal is the **#1** aesthetic treatment among non-invasive procedures

39%
of males have reportedly removed body hair below the neck

How does it work?

Dynamic Pulse Control™ (DPC) technology is a powerful light-based technology that effectively targets the hair follicle without harming any other parts of the skin. During the treatment, the heat energy denaturizes the melanin in the hair follicle, and as a result, that follicle cannot grow new hair.

Seeing is Believing

What our Patients are Saying:

(((SharpLight's hair reduction treatment was highly effective on my underarms! Now I don't have to worry about shaving before wearing a revealing dress for occasions. It's amazing how much time it saves me in the mornings.)))

Jenna Humfrey - SharpLight Patient

(((I'm not one to shave or wax my neck hair, but with SharpLight's hair reduction treatment, I don't need to worry anymore! With their built in cooling tip on the hand piece, I literally felt nothing and the results were instant.)))

Dan Troye - SharpLight Patient
